

VERTICAL COMPACTORS

VCP Series

The PTR VCP Series is a space saving, affordable, self-contained compaction system for weekly volume of 100 cu. yds. or more of trash. Instead of wind blown containers, the VCP controls housekeeping, deters short dumpers and vermin while reducing pilferage and refuse costs. They can be loaded from the ground, through a wall with a door and chute or off a dock with a door and chute.

The PTR VCP Series has been engineered to provide many years of reliable service. The heavy-duty structural steel components are welded by certified AWS (American Welding Society) technicians and tested to ensure high compaction forces.

The standard unit is U.L. approved and has standard 3 button controls (On/Off key switch, mushroom stop, start button) and a 20' Sealtite power connection.
